

Kremsmünster, July 2<sup>nd</sup>, 2024

## Mediscan plant expansion

Dear business partner,

We are pleased to announce that after 12 months construction time our new irradiation line in Kremsmünster is completed. We will start operation on 1<sup>st</sup> of August 2024.

With our new, fully automatized line, with another Rhodotron TT300 electron accelerator as a core unit, we can offer you a 4<sup>th</sup> unit for irradiation and product refinement. The capacity is increased by 400 pallets per day, leading to a total capacity in our Kremsmünster Campus of 1200 pallets per day.

In addition to electron beam treatment, we can offer sterilization based on X-Rays with our second Dual Line equipment.

**Please contact us to get further information about this next step as technological leader in the field of sterilization by irradiation!**

Best regards,

Mediscan GmbH & CoKG
